Arizona Association for Property and Evidence

LOCK & KEY SUMMER EDITION 2016

Promoting Professionalism in Evidence Management since 1992

President's Message

Hello again everyone!

Well, it is that time of year again for our annual training seminar in Prescott. It sounds like a bunch of people are attending this one so it should be fun! There are several interesting topics that speakers will be sharing with us so it should be interesting and informative.

We will also be having group discussion session so bring your questions, thoughts and ideas to share during the discussion so as a group we can see what issues are out there and see how other agencies are dealing with the issues.

Drive carefully and I look forward to seeing you all up there

Lane Darling, President

Diligent Workers: Meeting Project Deadlines

Tons of books exist on overcoming procrastination, and each one discusses project deadlines. Do you see project deadlines as inescapable irritants of life or challenges to be conquered? To become fearless about deadlines, attack each one immediately by dividing it into pieces, chunks, or mini-goals necessary to complete it. Supercharge your motivation for meeting these mini-goals by giving yourself rewards for each one you complete. Any small treat, small positive experience, or bit of fun will do. Acquire this deadline management skill and you will begin rejecting procrastination as a tool for managing the pain of deadlines.

Valley man's vape pen explodes, causes serious burns

A Valley man was treated for second and third degree burns at Maricopa Medical Center after his vape pen exploded in his back pocket.

"I've just been in a lot of pain," Otis Stovall said.

Stovall says he was at work Monday when he heard something explode.

"I'm looking down like, what is that sound? And it's like flames spurting out of my pocket so I just immediately started hitting it but I didn't know what was happening," he said.

The 22-year-old would later discover the explosion came from his back pocket.

"It was my vaporizer. Like, I'm trying to quit smoking cigarettes so that was my alternative," said Stovall.

He still though does not know how it happened but the explosion took a good portion of the skin on his right leg with it.

"I'm second degree burned down here and I think third up here," he said, pointing to his leg.

He's being treated at the Arizona Burn Center at Maricopa Integrated Health System. Doctors there say this is the second e-cig explosion case they've treated this year.

"It's good that he thought quickly to, you know, put that out," said Sabrina Forrest, Stovall's mom.

She's not happy that her son's alternative to smoking cigarettes nearly killed him.

"I thought it's checked for safety or anything like that before it's put out on the market but obviously it's not because it happened," she said That's why she wanted to get his story out there.

"So that everyone can know that this can actually happen where you have it in your pocket and you're going about your daily day and all of a sudden you can possibly catch on fire," said Forrest.

Stovall is set to have surgery on Thursday and the recovery from there could take weeks or more.

"If you're going to quit smoking cigarettes, just quit smoking cigarettes. Don't go to anything else," Stovall said.

The Summer Seminar Meeting will be held at:

Prescott Resort & Conference Center

Thursday & Friday June 9th & 10th, 2016

1500 East Highway 69
Prescott, Arizona

IN OTHER NEWS....

Teacher: How old is your father?
Kid: He is 6 years.
Teacher: What? How is this possible?
Kid: He became father only when I was born.
(Logic!! Children are quick and always speak their minds.)

TEACHER: Maria, go to the map and find North America.
MARIA: Here it is.
TEACHER: Correct. Now, Class, who discovered America?
CLASS: Maria.

TEACHER: Glenn, how do you spell 'crocodile?'
GLENN: K-R-O-K-O-D-I-A-L'
TEACHER: No, that's wrong
GLENN: Maybe it is wrong, but you asked me how I spell it.
(I love this child.)

TEACHER: Donald, what is the chemical formula for water?
DONALD: H I J K L M N O.
TEACHER: What are you talking about?
DONALD: Yesterday you said it's H to O.

TEACHER: Clyde, your composition on 'My Dog' is exactly the same as your brother's. Did you copy his?
CLYDE: No, sir; It's the same dog.
(I want to adopt this kid!!!)

TEACHER: Harold, what do you call a person who keeps on talking when people are no longer interested?
HAROLD: A teacher.

PASS THIS AROUND AND MAKE SOMEONE LAUGH!
LAUGHTER IS THE SOUL'S MEDICINE!!

Startup designs concealed carry firearm that looks like a smartphone

THE GUN, SET TO BE AVAILABLE MID-2016, HAS A DESIGN THAT'S MAKING COPS NERVOUS

MINNESOTA — Ideal Conceal, a startup, has created a new two-shot pistol that folds up to resemble a phone, CNNreported.

When folded, the palm-sized firearm can be slipped into an owner's back pocket and carried virtually anywhere, but with one click of a button, the safety opens and the gun is ready to fire.

"Smartphones are everywhere, so your new pistol will easily blend in with today's environment," Ideal Conceal told CNN. "In its locked position it will be virtually undetectable because it hides in plain sight.

The .380-caliber derringer does not resemble a firearm at all when it's folded and that has made police nervous.

"In general, the concept of any kind of weapon that's disguised, so that it's not apparent that it's a weapon, would be cause for concern," Bill Johnson, executive director and general counsel for the National Association of Police Organizations told CNN.

Depending on state laws, the firearm may require permits for carry.

The gun will be available mid-2016 and was estimated to be priced at $395. The company reportedly already received over 2,000 emails from eager buyers.

WANTED

Volunteers for the Arizona Association for Property and Evidence.

The Association is in need of more volunteers from its members to help contribute and learn the rolls that make up the Association.

Training Committee Personnel– If anyone is interested in joining they can assist at the seminar to become familiar with the duties of putting on a seminar. Ideas are needed and the more help that is provided makes for a smooth operation.

Remember that if you use a vendor see if they would like to become a corporate sponsor, Sandi has the forms.

Man Asks Permission To Rob House.

A man who allegedly asked permission to rob a house was taken into custody.
According to an arrest affidavit, Danny Acosta stole a microwave, but before he did that, he lifted his shirt, showing a black semi-automatic handgun to a subcontractor, and asked, "Can I rob the house?"

No End In Sight For Opioid Epidemic As Hospitalizations Rise 72%

http://www.msn.com/en-us/health/medical/no-end-in-sight-for-opioid-epidemic-as-hospitalizations-rise-72percent/ar-BBsy042?li=BBnb7Kz

A new study finds that opioid-related hospitalizations and infections have caused the total opioid-related health care costs to go up significantly.

Opioid addiction and abuse has been growing in the United States in recent years, resulting in a 286 percent increase in heroin-related overdose deaths from 2002 to 2013, according to the CDC. Heroin is only part of the problem, however, as more and more people get hooked on prescription painkillers.

Addiction itself already places a huge burden on healthcare, as do resulting overdoses. But a new study finds that health complications stemming from the opioid epidemic — like infections from contaminated needles — accumulate to even greater health care costs. Published in the journal Health Affairs and conducted by researchers at Beth Israel Deaconess Medical Center (BIDMC) and the VA Boston Healthcare System,

the study found that opioid-related hospitalizations have increased by 72 percent and health care costs associated with opioid addiction have grown to $15 billion from 2002 to 2012. **…..Continued on Page 8**

Arizona Association for Property and Evidence

Mini Cheeseburger Pies

INGREDIENTS:

- 1 Sheet frozen puff pastry dough
- 1 pound lean ground beef
- 1/2 sweet onion, chopped
- 1 Tablespoon steak seasoning
- 5 slices of your favorite cheese
- 1 egg yolk
- 1 Tablespoon water

DIRECTIONS:

Let the puff pastry dough sit out at room temperature for 20 minutes.

Meanwhile preheat the oven to 375 degrees.

In a bowl, mix the ground beef, onion, steak seasoning, and seasoning sauce together. Form into 5 small, flat patties.

Place the patties in a slow cooker for 1 hour on high. Remove and top each burger with a slice of cheese.

Roll the puff pastry sheet to flatten slightly. Cut into 5 even rectangles. Cover each burgers with a piece of puff pastry and wrap it around the bottom pinching all of the edges to seal. Place on a baking sheet pinch side down.

Whisk together the egg yolk and water to make an egg wash. Brush each wrapped pastry with the egg wash. Bake for about 15 minutes, until the puff pastry is nice and brown.

5 Best Practices for Inventory Management That Apply to Every Business

Last Updated: Apr 14, 2016 Posted by Nicole Pontius in Asset Tags

Inventory management isn't something many professionals enjoy thinking about, even those who work in the field. That's one of the primary reasons it's helpful to implement best practices that are proven to streamline inventory management processes. Making an otherwise cumbersome, time-consuming, and frustrating process simpler and more efficient will save you many headaches, keep your workforce on-task and business processes flowing, and even boost the company bottom line. Inventory management isn't something that's limited to warehouses. Even manufacturing businesses benefit from sound inventory management for maintenance, repair, and operations equipment. Here are a few best practices for inventory management that apply to every business.

Proper Asset Categorization Lays the Foundation

The first step in effective inventory management is to properly categorize your company's assets. Defining moveable versus fixed assets is a broad categorization, but you should also categorize assets based on a system that makes sense for your company, whether that means categorizing assets by use case, by department, value, or some other metric. Storing all of this information in a central asset database is the key to maintaining precise control over your inventory, quickly finding the information needed, and analyzing the data collected to further optimize your inventory processes.

Automate, Automate, Automate

Inventory management becomes a huge (and unnecessary) headache without automation. Asset tracking systems completely streamline inventory management processes, simplify documentation, and maintain accuracy beyond what's achievable through manual inventory control processes. Not to mention, it's a huge time-saver. Businesses utilizing automatic identification and data capture (AIDC) asset tracking processes are able to reduce the frequency of manual inventory counts and save substantial man hours. Handheld barcode scanners are an excellent tool for fully automating data collection for inventory control, allowing staff to quickly scan supplies, parts, and equipment to maintain accuracy in your central database.

Simplify Re-Ordering Processes

Another advantage of using asset tags and AIDC for tracking inventory is the ability to simplify re-ordering processes. There are a variety of asset tags available for different applications, including two-part asset labels, which offer duplicate identification numbers for accurate record-keeping and simple re-ordering. Ordering can also be streamlined when vendor information is stored in an asset management software application. In any case, take advantage of the technology available and save your staff time by making it simple to order the supplies and equipment needed to keep business processes flowing smoothly.

Reduce Repair-Cycle Times

The goal of any organization is to produce products or services at the lowest possible cost in the shortest time possible. It's easy to get off-track in achieving this goal when essential equipment breaks down and you're not prepared with the parts necessary to get it back in working order. Delays from parts suppliers only further complicate the issue, and backordered parts can spell disaster. Through asset management and inventory control, you can forecast the typical lifespan for both parts and equipment, allowing you to be prepared for maintenance and repairs before they ever occur. The result is minimized downtime and a continuous workflow.

Maintain Minimal Stock Levels

While it may seem contradictory to the best practice of reducing repair-cycle times discussed above, it's also not efficient to maintain too much inventory. Excess inventory adds to overhead and creates a shortage of storage space, which could be used for a more immediate need. With asset tracking, however, forecasting is more accurate and your data will demonstrate which supplies, parts, and equipment you should prioritize and precisely how much stock you should have on hand. Asset tracking also enables organizations to optimize facility layouts to store the most frequently used supplies in convenient areas, with rarely used equipment, parts, and supplies stored in harder-to-access areas.

Inventory management is a critical business process, but it doesn't have to consume substantial time or resources. By implementing sound asset tracking systems with automatic identification and data capture, inventory control can become a streamlined, straightforward process that actually improves business efficiency company-wide. These best practices will help you gain complete control over inventory and reap maximum benefits.

In Honor of Flag Day – June 4th
A little trivia and facts about our great flag.

Flag Display Etiquette

I pledge allegiance to the Flag of the United States of America and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice for all.

Disposal

When the flag is in such condition that it is no longer a fitting emblem for display, it should be destroyed in a dignified way, preferably by burning. The two official days for retiring the flag are Flag Day and Columbus Day.

It is the universal custom to display the flag only from sunrise to sunset on buildings and on stationary flagpoles in the open. However, when a patriotic effect is desired, the flag may be displayed 24 hours a day if properly illuminated during the hours of darkness. The flag should be hoisted briskly and lowered ceremonially.

No other flag or pennant should be placed above, or if on the same level, to the right of the flag of the United States of America.

Mast or staff?

When a flag is lowered at sea, it is flown at half-mast. On land, it is flown at half-staff. The flag is flown at half-staff for mourning. The flag is raised briskly to the top of the pole, then lowered halfway. To lower the flag, first raise it to the top of the pole and lower it ceremonially.

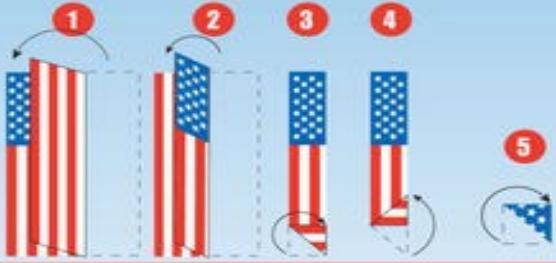
Displaying the Flag

When displayed either horizontally or vertically against a wall, the union should be uppermost and to the flag's own right, that is, to the observer's left. When displayed in a window, the flag should be displayed in the same way, with the union or blue field to the left of the observer in the street.

The flag should not be draped over the hood, top, sides or back of a vehicle, train or boat. When the flag is displayed on a vehicle, the staff shall be fixed firmly to the chassis or clamped to the right fender.

How to fold the flag

To fold the flag ceremoniously, first fold it lengthwise, bringing the stripes half up over the blue field. Then repeat, with the blue field on the outside. Beginning at the lower right, make a series of triangular folds until the flag resembles a cocked hat with only the blue field visible.



….. Continued from page 4 - Opioid Epidemic

"The growing problem of opioid abuse in the United States has been well documented, but our study is the first of its kind to quantify serious infections related to opioid abuse and their impact on the U.S. hospital system and on health care costs," said Dr. Shoshana Herzig, assistant professor of medicine at Harvard Medical School and an author of the study, in a statement.

In the study, the researchers examined U.S. inpatient hospitalization data, focusing primarily on opioid-related scenarios. They found that between 2002 and 2012, opioid-related hospitalizations rose 72 percent to 529,275 — at the same time as the total number of hospitalizations remained consistent. In addition, opioid-related hospitalizations with serious infection rose 91 percent. Cases of infection included endocarditis, osteomyelitis, septic arthritis, and epidural abscesses.

Secondly, the researchers analyzed health care costs involved with opioid-related hospitalizations and infections. Between 2002 and 2012, total inpatient charges having to do with opioid abuse or addiction quadrupled to $15 billion. Seven hundred million of that total amount went towards opioid-related infections. When it was all broken down, they found the typical cost of a single opioid-related hospitalization to be $28,000; when infection was involved that number jumped as high as $107,000. Considering the growing numbers of opioid abusers, that's a huge amount of money.

The recent study is an indication that the opioid epidemic won't be slowing any time soon. And a 2015 study found that more than 90 percent of people who overdose on prescription painkillers continue using afterwards, hinting that treating addiction may be especially difficult. Perhaps that's why the CDC released new guidelines last month encouraging physicians to avoid over-prescribing painkillers, and the FDA passed a new rule that requires opioid drugs to come with warning labels about addiction and overdose risks.

"The downstream consequences of opioid abuse and dependence, including serious infection, are severe — for individual patients and their loved ones, caregivers, hospital systems and the federal government," Herzig said in the statement. "A commitment to decreasing access to opioids, early treatment, and preventive strategies will be vital to decrease the burden of disease and cost to the health care system and society."

Pistols, knife found at bottom of drained Tempe Town Lake

TEMPE, Ariz. — Tempe police said they found a number of weapons at the bottom of Tempe Town Lake when it was drained last month.

Police said they recovered a knife and three pistols, one of which was stolen, as well as part of another pistol when the lake was empty.

Officers said they are looking into the firearms to see if they were used in any other crime.

The lake was emptied in March to complete construction on a new hydraulically-operated steel-gate dam that replaces an inflatable rubber system. The $47 million project replaces a dam made of rubber bladders that burst a few years ago, flooding nearby areas and emptying the lake.

It is now being refilled.

"It's going to take about two weeks to fill the lake completely," Kris Baxter-Ging with the city of Tempe. "We will be refilling the lake with more than 880 million gallons of water."

KTAR's Corbin Carson contributed to this report.

Phoenix man claims luggage with 25 pounds of marijuana at airport

PHOENIX — A Phoenix man was in jail after police in Tennessee said he claimed lost luggage that contained 25 pounds of marijuana.

Hannibal el Aziz Muhammad, 25, was charged with having a controlled substance and possession with intent to sell, according to an affidavit filed in Nashville, Davidson County on Sunday.

Police said a Southwest Airlines baggage handler at Nashville International Airport called them early in the evening to report a suspicious bag.

The airline worker said he opened the bag because there was no luggage tag or any other type of identifying mark on the outside.

Hoping to find something that would establish the bag's owner, the handler opened it and believed he smelled marijuana in a plastic bag.

According to a published report, the airline got hold of the likely owner.

When Muhammad showed up to retrieve the bag, Metro police arrested him as soon as he touched the bag.

He was being held on a $30,000 bond.

RULES OF THUMB

Safety and Survival:
Finding a Missing Person
Missing hikers are usually found within four miles of where they were last seen, the elderly within a mile, and suicides within one-quarter mile.—Marilyn Greene

Food and Drink:
Making Wine
One ton of grapes will make 170 gallons of wine.—L. Wagner, vintner

ARIZONA TRIVIA

The ringtail is the official state mammal. The ringtail is a small fox-like animal about two and one-half feet long and is a shy, nocturnal creature.

Arizona observes Mountain Standard Time on a year round basis. The one exception is the Navajo Nation, located in the northeast corner of the state, which observes the day-light savings time change.

In 1926, the Southern Pacific Railroad connected Arizona with the eastern states.

Patton On Leadership:

#14. Demand Difference of Opinion—

No one is thinking if everyone is thinking alike.

Consensus is about everyone acting toward a common purpose. It does not require thinking in lockstep. Leadership requires marshaling resources cooperatively toward a goal, while simultaneously preserving—and encouraging—independence of thought. The more minds at work independently on a situation, the better. Encourage the exercise of imagination. Insist on cooperation, but welcome creative dissent. Never close yourself to suggestion and insight from others, including from the most junior members of the team.

Based on the best-selling book by Alan Axelrod: *Patton on Leadership: Strategic Lessons For Corporate Warfare*

Life consist not in holding good cards,
but in playing those you hold well.

21 health benefits of Marijuana

Legalizing marijuana is on the rise so I though I would share the benefits behind this drug…

1. Weed can be used to treat Glaucoma.
2. It may help reverse the carcinogenic effects of tobacco and improve lung health.
3. It can help control epileptic seizures.
4. It also decreases the symptoms of a severe seizure disorder known as Dravet's Syndrome.
5. A chemical found in marijuana stops cancer cells from spreading in the lab.
6. It may decrease anxiety.
7. THC may slow the progression of Alzheimer's disease.
8. The drug eases the pain of multiple sclerosis.
9. Other types of muscle spasms could be helped too.
10. It lessens side effects from treating hepatitis C an increases treatment effectiveness.
11. Marijuana treats inflammatory bowel diseases, including Crohn's disease.
12. It relieves arthritis discomfort.
13. It keeps you skinny and helps your metabolism.
14. While not really a health benefit, marijuana spurs creativity in the brain.
15. Pot soothes tremors for people with Parkinson's disease.
16. Marijuana helps veterans suffering from PTSD.
17. Marijuana protects the brain after a stroke.
18. It might protect the brain from concussions and trauma.
19. It can help eliminate nightmares.
20. Weed reduces some of the awful pain and nausea from chemo, and stimulates appetite.
21. Marijuana can help people trying to cut back on drinking.

Despite the fact that the Drug Enforcement Agency categorizes marijuana as a schedule I drug, one that has no accepted medical use, a majority of Americans have thought medical pot should be legal since the late 1990s — and a majority now support recreational legalization as well. Even the NIH's National Institute on Drug Abuse lists medical uses for cannabis. But even though researchers have identified some fascinating potential benefits of medical marijuana so far, it's something that's still hard to study, making conclusive results tough to come by. The schedule I classification means it's hard for researchers to get their hands on pot grown to the exacting standards that are necessary for medical research, even in states where it's legal. Plus, no researcher can even try to make an FDA-approved cannabis product while it has that DEA classification, which removes some motivation to study the plant. More research would identify health benefits more clearly and would also help clarify potential dangers — like with any psychoactive substance, there are risks associated with abuse, including dependency and emotional issues. And many doctors want to understand marijuana's effects better before deciding whether to recommend it or not.

Arizona Association for Property and Evidence

Did You Know?

The world's largest solar telescope is located at Kitt Peak National Observatory in Sells, AZ.

Arizona is large enough to fit all of New England plus the state of Pennsylvania inside of it.

Arizona has the largest percentage of land designated as Indian lands and 21 federally recognized American Indian tribes.

Colossal Cave is one of the biggest dry caverns in the world with stalactites with names like Bone-crusher and Fang.

Arizona has 13 species of rattlesnakes more than any other state.

Morton Salt has been mining a salt deposit in unincorporated Glendale since the mid-1980s, that is about 40 square miles wide and more than a mile thick.
